METABOLIC

4

Cagrilintide \$45.00

5 mg / vial

Long-acting amylin and calcitonin receptor agonist. Investigated for appetite suppression, gastric emptying delay, and visceral fat reduction, with synergistic effects when combined with GLP-1 agonists.

Retatrutide \$120.00

20 mg / vial

Triple agonist targeting GLP-1, GIP, and glucagon receptors simultaneously. Investigated for aggressive visceral fat reduction and metabolic remodeling across multiple hormonal pathways.

Semaglutide \$45.00

5 mg / vial

GLP-1 receptor agonist for appetite regulation, gastric emptying delay, and glucose homeostasis. Broadly studied for weight reduction and cardiometabolic outcomes.

Tirzepatide \$85.00

10 mg / vial

Dual GIP and GLP-1 receptor agonist with a long-acting profile. Investigated for enhanced weight reduction and glycemic control beyond GLP-1 monotherapy.

RECOVERY

1

KLOW \$100.00

80 mg / vial

Multi-peptide blend featuring GHK-Cu, BPC-157, TB-500, and KPV. Investigated for tissue repair, inflammation response, and recovery pathways.

LONGEVITY

1

MOTS-C \$40.00

10 mg / vial

Mitochondrial-derived peptide encoded by mtDNA. Investigated for AMPK activation, insulin sensitivity, metabolic stress adaptation, and age-related decline in mitochondrial function.

LONGEVITY

1

NAD+ \$60.00

500 mg / vial

Coenzyme central to cellular energy metabolism and DNA repair. Investigated for mitochondrial biogenesis, sirtuin activation, and attenuation of age-related decline in cellular function.

GH AXIS

2

Ipamorelin \$25.00

5 mg / vial

OUT OF STOCK

Selective ghrelin receptor agonist triggering pulsatile GH release. Studied for muscle preservation and recovery with minimal impact on cortisol or prolactin.

Tesamorelin \$55.00

10 mg / vial

Stabilized synthetic GHRH analog signaling the pituitary for endogenous GH release. FDA-approved for visceral lipodystrophy; investigated for visceral fat reduction and body composition.
